

1. First you need to install the Wisenet Wave App from your app store.

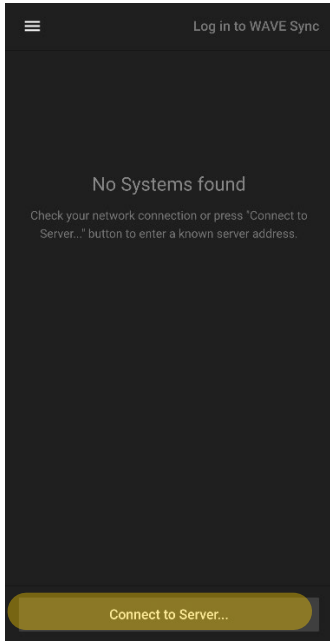

Android

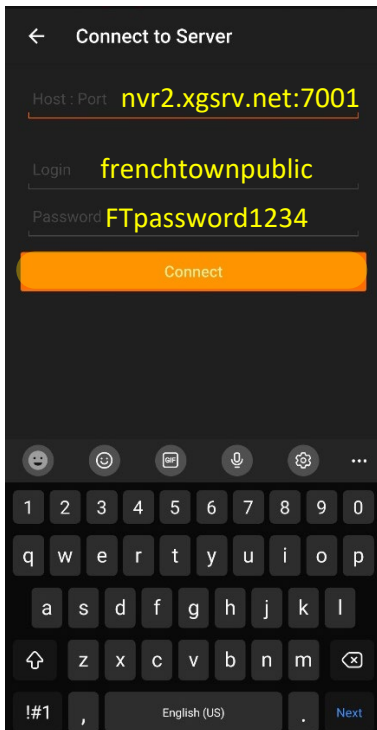

iPhone

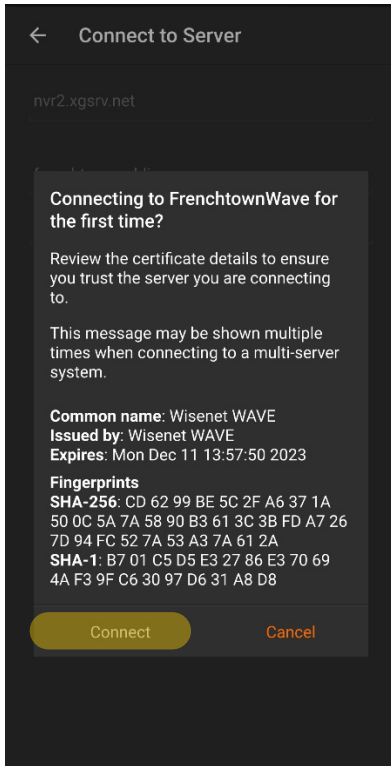

2. After Installing the app open the app and you will see this screen. Press where it says connect to server.

3. Enter the information below and press connect

4. After you press connect you will be prompted to accept the certificate. Press connect one more time and the app will be configured.

5. You will now see the train cameras that have been connected. Every time you open the app this screen will show up. The thumbnail for each camera is live but if you want a larger view, you just press on which camera you would like to see and it will go to a full screen view.
